

The American Society of Agronomy has been selecting outstanding members to the position of Fellow since 1924. Colleagues within the Society nominate worthy members, and the Fellows Committee carefully ranks the nominees to determine the final selection.

This year Drs. Vince Haby and Dudley Smith, both of the Soil & Crop Sciences Department at Texas A&M University, were named as Fellows.

Dr. Haby is a Regents Fellow, professor and soil scientist. His research program emphasizes soil chemistry, fertility and plant nutrition for forage crops. Haby served as associate editor for *Agronomy Journal*, serves as senior editor for *Forage and Grazinglands* and has been active in ASA, SSSA and the American Forage and Grassland Council.

Dr. Smith is professor emeritus. He was involved in weed and pesticide research in agronomic crops. Throughout his career he produced more than 200 domestic and international publications and presentations on agricultural research, environmental quality and undergraduate teaching. Smith also served as associate director of the Texas Agricultural Experiment Station and has provided innovative programs in ASA's resident education division.
